

THE GREATEST EVER TURBO SERVICE ON EARTH

Now a bigger choice and longer warranties from the world's largest independent supplier of OE standard turbos.

Order your OE direct replacement turbo from:

BTN
TURBO
The turbocharger people

No one on earth supplies better quality or value original fit turbos.

BTN Turbo has the UK's largest stocks of direct replacement turbos for cars, LCVs and trucks – at highly competitive prices.

Peace of mind for you and your customers

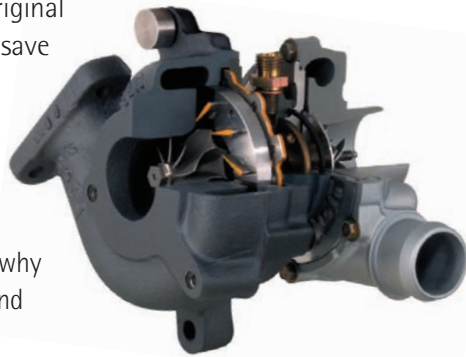

Every turbo from BTN is identical to the unit originally fitted by the vehicle manufacturer – same spec, same performance, same reassuring quality. Most turbos we supply are brand new; we only remanufacture, using genuine OE parts and spec, when it offers substantial savings.

Introducing OMX for older cars – save up to 35%

OMX is Original Manufacturer Exchange: quality exchange turbos available for popular cars over seven years old. They use genuine original parts, are tested by the original manufacturer, have a 12 month warranty and save you up to 35% vs. the equivalent new turbo.

Only new variable turbine turbos – because you can't risk repairs

Today's complex variable turbine turbos can only be reliably repaired by their manufacturers. That's why BTN Turbo only supplies brand new VNT™, VGT™ and VTG™ replacement units.

Expert advice from BTN Turbo

BTN Turbo tips. What kills a turbo?

Don't always assume the turbo has failed. Before replacing it, check for faults in the fuel, air, exhaust and oil systems. Turbo problems are nearly always oil-related: contamination by fuel, water or incorrect oil, or starvation due to leaks, blockages or not priming the turbo. BTN Turbo FitKits include an oil filled injector to 'pre-prime' the turbo, minimising the risk of oil starvation on engine start-up.

Now all new turbos have a two year warranty!

Plus diesel commercial vehicles are still covered by our No Quibble Warranty for the first 12 months – if the turbo fails for any reason, we'll replace it.

The best value is from BTN Turbo – your turbocharger people:

- find the right unit fast with turbo search on www.bnturbo.com
- all units include free FitKit so they're ready to fit
- includes oil filled pre-priming injector to avoid start-up faults
- full technical support via BTN Turbo helpline – 01895 466663
- no surcharge on brand new turbos
- free next day delivery – faster than most main dealers.*

* Orders received before 5pm are delivered the next working day.

How to correctly identify a turbo

Make sure you get the right replacement, first time. Check the label or nameplate on the turbo's outer casing for:

1. The turbo model or type number
2. The turbo or vehicle manufacturer's part number or assembly number

If you can't find this information, please help us identify the correct turbo by telling us the application, engine make and size and vehicle's year of registration
